BIOLOGY (BS)

Co-Chair: Robert Grebenok, PhD (grebenor@canisius.edu)
Co-Chair: Elizabeth Hogan, PhD (hogane@canisius.edu)

Introduction
The Biology major offers broad training in the biological sciences and balances organismal with cellular/molecular biology. This background serves as a solid preparation for

1. future graduate level education in the biological sciences
2. future professional education in clinical and health-related sciences
3. employment at the bachelor’s level
4. additional training in other disciplines that require a thorough understanding of biology, such as various areas of business, communications, engineering, law and social policy development

The biology program of study combines lectures and a hands-on learning experience in both its core and elective courses. The elective courses offered within the major cover a variety of biological fields, which allow students to sample many areas of biology or to investigate more thoroughly specific areas of special interest. In addition, the opportunity to perform independent research with a faculty member in the Biology Department helps develop additional skills not normally offered in undergraduate courses and provides additional opportunities to apply the knowledge acquired in coursework. Please see the website (https://www.canisius.edu/academics/programs/biology) for a more detailed description of the program, faculty, facilities, academic and co-curricular opportunities. Canisius has developed programs for students interested in Early Assurance Acceptance into the SUNY Upstate (College of Medicine) and Lake Erie College of Osteopathic Medicine (College of Medicine, School of Dental Medicine and School of Pharmacy); Joint Degree Programs with the University at Buffalo (School of Dental Medicine and School of Pharmacy), Lake Erie College of Osteopathic Medicine (College of Medicine, School of Dental Medicine and School of Pharmacy), and SUNY College of Optometry. Canisius also has a Memorandum of Understanding with the Ontario Veterinary College, University of Guelph. In addition, a series of specialized courses have been developed for the non-science major that relate biological concepts and technological advances. For more information please view the department’s Biology website (https://www.canisius.edu/academics/programs/biology).

Qualifications
Students must maintain a 2.0 overall average to graduate with a degree in Biology. Students must attain a C- or greater in each of the introductory courses (BIO 111, BIO 112, and BIO 211) in order to progress into the next course in the Biology sequence. Students must have a C or better in BIO 212 and successfully complete BIO 211L and BIO 212L to take any 400-level Biology courses.

Advisement
All students should have an advisor in the major and should contact the department directly to have an advisor assigned if they do not already have one. Meetings with academic advisors are required prior to students receiving their PIN for course registration each semester. All majors should work closely with their advisor in discussing career expectations, choosing their major electives, developing their entire academic program and planning their co-curricular or supplemental academic experiences. In addition to academic advisement for the major, advisement relevant to career options in the biological sciences, including pre-clinical and research interests, is also provided.

Major Experiences
All faculty in the Biology Department are research-active and maintain their own research program at Canisius. Students interested in pursuing research opportunities with Biology faculty are encouraged to speak with individual faculty members about their work and research opportunities in their respective laboratories.

Biology with Distinction
This degree option for the biology program is intended for biology majors who have a true interest in research and may have career interests in biological or biomedical research. Upon graduation they will receive certification of completing their major with distinction. Program requirements include writing of a formal research proposal to be submitted to their thesis committee, completion of the research project (600 research hours minimum), writing the final thesis paper, and presentation of a departmental seminar with verbal thesis defense in front of their committee. Interested students must apply to this program by January of their junior year. See the department chair for complete details including appropriate paperwork.

Double Majors
Students who wish to expand their educational opportunities may decide to declare a double major. The decision may be based on career goals or planned graduate studies. Before a student declares a double major, it is important to meet with the appropriate academic departments for advisement. Some double major combinations can be completed within the minimum 120 credit hour degree requirement, but in some cases additional coursework may be required. In order to declare a double major, the student must complete the appropriate double major request form and get the signature of each department chairperson and the appropriate associate dean. Please note that students will receive only one degree, regardless of the number of majors they complete.

Minors in Other Disciplines
Minors provide students the opportunity to pursue additional interests but generally do not require as many courses as a major. Minors generally range from five to eight required courses. The minors page (http://catalog.canisius.edu/undergraduate/minors) provides a complete list of minors and provides links to each minor. Some majors and minors can be completed within the minimum 120 credit hour degree requirement, but in some cases additional coursework may be required. Students must complete the appropriate minor request form.

Additional Course Considerations
It is particularly important that the biology major maintain the indicated required science course sequence to ensure prerequisite requirements are met for upper-level courses and to ensure that all basic requirements have been completed prior to taking standardized graduate/professional school entrance examinations (e.g. GRE, MCAT, DAT). These exams are normally taken late in spring semester of the junior year. Biology majors normally take BIO 111/BIO 112 and CHM 111/CHM 112 in the freshman year, and BIO 211/BIO 212 and CHM 227/CHM 228 in the sophomore year so that they stay on schedule for completing the major requirements. In selecting courses for the major, students should consult carefully with their advisors each semester about the best selection of courses for the coming semester.
semesters. In addition, students will want to consult the on-line advisement guide, which is published each semester and contains valuable information about course offerings for the coming semester’s offerings.

**Curriculum**

**An Ignatian Foundation**

All undergraduate students must complete either the Canisius Core Curriculum (http://catalog.canisius.edu/undergraduate/academics/curricular-information/core-curriculum) or the All-College Honors Curriculum (http://catalog.canisius.edu/undergraduate/academics/curricular-information/all-college-honors-program). Many schools refer to their college-wide undergraduate requirements as “general education” requirements. We believe that the core curriculum and the honors curriculum are more than a series of required classes; they provide the basis for a Jesuit education both with content and with required knowledge and skills attributes that are central to our mission.

**Free Electives**

Students may graduate with more but not less than 120 credit hours. Free electives are courses in addition to the Canisius Core Curriculum or All-College Honors Curriculum and major requirements sufficient to reach the minimum of 120 credit hours required for graduation.

**Major Requirements**

The Biology curriculum fulfills all requirements and prepares students well for graduate programs in the biological sciences, and for schools of allopathic (MD) and osteopathic (DO) medicine, dentistry, veterinary medicine, and several allied health programs including, but not limited to, chiropractic, optometry, physician’s assistant, and podiatry.

**Roadmap**

**Recommended Semester Schedule for Major Course Requirements**

**Fall**

- BIO 111
- & 111L
- CHM 111
- & 111L
- MAT (Calculus or Statistics)

**Spring**

- BIO 112
- & 112L
- CHM 112
- & 112L
- MAT (Calculus or Statistics)

**Sophomore**

- Fall

- BIO 211
- & 211L
- CHM 227
- & 227L
- BIO 351

- Spring

- BIO 212
- & 212L
- CHM 228
- & 228L

**Junior**

- Fall

- PHY 201
- & 201L

- Spring

- PHY 202
- & 202L

**Senior**

- Fall

- BIO Elective with lab

- Spring

- BIO Elective with lab

**Note:** For students who need additional math and or chemistry background, the combination of CHM 109 and CHM 110 can be taken in place of CHM 111. CHM 109 is taken in the fall of the freshman year, CHM 110 & CHM 111L are taken in the spring of the freshman year, and CHM 112 & CHM 112L are taken either in the summer or in the fall of the sophomore year concurrent with CHM 227 & CHM 227L.

**Learning Goals & Objectives**

**Student Learning Goal 1**

Students will develop competency with respect to knowledge, having a working understanding of basic concepts in the biological sciences.

**Students will:**

- Objective A: Demonstrate detailed knowledge within at least two areas of biology to be selected among the following: from ecology/evolutionary biology; molecular biology/cellular biology/biochemistry; physiology/organism biology;
- Objective B: Connect previously learned material with current research in biology.

**Student Learning Goal 2**

Students will develop problem solving skills applicable to the biological sciences.

**Students will:**

- Objective A: Accurately interpret data;
- Objective B: Design an experiment to address a specific hypothesis;
- Objective C: Critically analyze an article from the original scientific literature or a professional report.

**Student Learning Goal 3**

Students will demonstrate mastery with respect to technical skills in the biological sciences.

**Students will:**

- Objective A: Effectively communicate scientific material in a written format;
- Objective B: Effectively communicate scientific material orally;
- Objective C: Draw graphs or design tables to accurately represent scientific information;
- Objective D: Describe or Explain instrumentation and technology appropriate to their course of study.

**Minors**

The Biology Department offers six minors: General Biology, Cell and Molecular Biology, Environmental Biology, Neuroscience, Animal Behavior, and Zoo Biology. Students interested in the Cell and Molecular Biology, Environmental Biology, Neuroscience, or Biology minors should consult with the coordinator of that minor and their departmental advisor to plan the proper course selections. Students interested in the Animal Behavior and Zoo Biology minors should consult with Dr. Sue Margulis, Chair of the Animal Behavior, Ecology and Conservation (ABEC) department. A description of the Animal Behavior and Zoo Biology minors can be located within the ABEC.
Courses

BIO 109 Nutrition 3 Credits
How food intake influences us as individuals and as components of society, what food is, how we get and use food, processes regulating its use.
Fulfills College Core: Field 6 (Natural Sciences)

BIO 111 Introductory Biology I 3 Credits
Introductory course for freshmen biology and other science majors. Course provides foundation of evolution, natural selection and heredity, and ecological principles as mechanisms of selection and evolution. Topics include the basis of evolutionary theory, concept of natural selection, evolution of living cells, basic inheritance, biological diversity, intra- and inter-specific interactions between organisms, and interactions between organisms and their environment. Three hours of lecture and a one and a half hour recitation per week.
Fulfills College Core: Field 6 (Natural Sciences)
Offered: every fall.

BIO 111L Introductory Biology Laboratory I 1 Credit
Laboratories in selection, heredity, diversity, population biology and ecology. Also includes introduction to scientific method and scientific writing. Three hours of lab per week.
Corequisite: BIO 111.
Offered: every fall.

BIO 112 Introductory Biology II 3 Credits
Introductory course for freshmen biology and other science majors. Course focuses on homeostasis in multicellular organisms through exploring structure and function relationships in plants and animals. Topics include cell interactions in tissues and organs, anatomy and physiology of plants and animals, and the role of natural selection in shaping the anatomy and physiology of plants and animals. Three hours of lecture and a one and a half hour recitation per week.
Prerequisite: minimum grade of C- in BIO 111.
Offered: every spring.

BIO 112L Introductory Biology Laboratory II 1 Credit
Laboratories that provide an examination of the structure and function of living organisms (plants and animals). Three hours of lab per week.
Corequisite: BIO 112.
Offered: every spring.

BIO 114 Human Biology: Introduction to Human Anatomy and Physiology 3 Credits
Introductory course for those students requiring an understanding of the structure and function of the human body. Course examines the relationships among physiology, anatomy, metabolism, genetics, evolution, the physical environment, and exercise, and how they relate to diet, human health and disease. Three hours of lecture and one three-hour lab per week.
Fulfills College Core: Field 6 (Natural Sciences)
Offered: every fall & spring.

BIO 114L Human Biology: Introduction to Human Anatomy and Physiology Laboratory 1 Credit
One three-hour lab per week.
Corequisite: BIO 114.
Offered: every fall & spring.

BIO 115 Musculoskeletal Anatomy and Physiology 3 Credits
Examination of the anatomy, physiology and biomechanical characteristics of the musculoskeletal components, and associated neural and vascular structures, of the human body. Three hours of lecture and one three-hour lab per week.
Prerequisite: minimum grade of C in BIO 114.
Offered: every fall & spring.

BIO 115L Musculoskeletal Anatomy and Physiology Laboratory 1 Credit
One three-hour lab per week.
Corequisite: BIO 115.
Offered: every fall & spring.

BIO 116 Disease: Myth and Reality 3 Credits
Exploration of causation, treatment and prevention of illness. Objective: to increase awareness and understanding of health and disease.
Fulfills College Core: Field 6 (Natural Sciences)

BIO 120 Biology in the News 3 Credits
The biological concepts underlying science articles appearing in the current news media, examining these concepts in the context of relevant economic, social and cultural issues. Topics will vary.
Fulfills College Core: Field 6 (Natural Sciences)
Offered: fall.

BIO 132 Genes and People 3 Credits
How human characteristics are transmitted and affect future generations. Ethical and legal ramifications of genetic advances.
Fulfills College Core: Field 6 (Natural Sciences)

BIO 150 Animal Nutrition 3 Credits
Nutrition and dietary science focused on the maintainance of wildlife in captivity. Practical examples at our local zoo and aquariums are included.

BIO 166 Biology of Birds 3 Credits
An introduction to the diversity, behavior, anatomy, and physiology of birds. Students will learn how to identify common local birds. Topics include flight, songs and calls, finding mates, nesting behaviors, and migration. Three hours of lecture per week.
Fulfills College Core: Field 6 (Natural Sciences)
Offered: occasionally.
BIO 199 Science Scholars Transfer Student Seminar 1 Credit
Seminar course for first year BIO/ENV/ABEC transfer students to aid in integration into respective major(s). During the semester, we will review skill necessary for success in the major(s), discuss topics identified as missing/ lacking from transferred introductory biology courses, and how to get involved in departmental activities (i.e. research, clubs, etc.). Course meets once a week (75 minutes) and will be scheduled around availability of participants, as possible. All Science Scholar Transfer students are required to take this course during the first year of their scholarship.
Restrictions: Canisius Science Scholar transfer scholarship recipient or permission of instructor.
Offered: every fall.

BIO 211 Biochemistry and Cell Biology I 3 Credits
Fundamentals of biochemistry (biological chemistry) and cell biology for students majoring in the biological sciences. Structure and biological activities of proteins and lipids. Integrates the cellular and biochemical relationships between systems within the cell, with an emphasis on membrane transport, signal transduction, and cell motility. Three hours of lecture and a one and a half hour recitation per week.
Prerequisite: minimum grade of C- in both BIO 111 & BIO 112; completion of CHM 110 or CHM 111; and CHM 112 (may be taken concurrently).
Corequisite: BIO 211L.
Offered: every fall.

BIO 211L Biochemistry and Cell Biology Lab I 1 Credit
Investigative laboratory provides opportunity for students to learn how to isolate, measure, and characterize macromolecules present within a variety of cellular systems. Three hours of lab per week.
Corequisite: BIO 211.
Offered: every fall.

BIO 212 Biochemistry and Cell Biology II 3 Credits
Fundamentals of biochemistry (biological chemistry) and cell biology for students majoring in the biological sciences. Structure and biological activities of carbohydrates and nucleic acids. Integrates the cellular and biochemical relationships between systems within the cell with an emphasis on the role cell communication, respiration, photosynthesis, gene expression, and cell division. Three hours of lecture and a one and a half hour recitation per week.
Prerequisite: minimum grade of C- in BIO 211 & CHM 112.
Offered: every spring.

BIO 212L Biochemistry and Cell Biology Lab II 1 Credit
Examination of experimental methodologies that relate the expression and action of various macromolecules to biological processes at the cellular/molecular level. The role of experimentation in the scientific process is emphasized. Three hours of lab per week.
Prerequisite: BIO 211 & minimum grade of D in BIO 211L. Corequisite: BIO 212.
Offered: spring.

BIO 221 Biology of Women 3 Credits
Biological principles applied to the human female. Structure, function, growth and development throughout the life cycle. Includes relevant social, psychological and medical information. Associated with Women's Studies Program.
Fulfills College Core: Field 6 (Natural Sciences)
Offered: occasionally.

BIO 298 Pre-clinical Experience for Undergraduates 1 Credit
Students undertake a substantial shadowing experience in a clinical setting. Must document and complete a minimum of 100 hours of voluntary work with the same clinician within the academic period. An academic component is also required. Student arranges contact with clinician. Application process is required.
Prerequisite: BIO 111, BIO 112, & approval of the department chair.
Offered: fall & spring.

BIO 300 Research Methods (non-credit) 0 Credits
Training in experimental methods for the biological sciences under the direct supervision of a faculty member. Each section and research methodologies taught within the section unique to the instruction and research work of a specific faculty member. Requires approval of faculty member for enrollment into an individual section.
Offered: fall, spring, & summer.

BIO 301 Research Methods (credit) 1 Credit
Training in experimental methods for the biological sciences under the direct supervision of a faculty member. Each section and research methodologies taught within the section unique to the instruction and research work of a specific faculty member. May be taken in multiple semesters for credit. Requires approval of faculty member for enrollment into an individual section.
Offered: fall, spring, & summer.

BIO 302 Science Scholars Seminar I: Research, Presentations, & Publishing 1 Credit
Seminar course for students actively pursuing undergraduate research, or students planning on pursuing graduate research in the future. During the semester, we will discuss how to get involved in research lab, how to pursue independent research projects, how to seek research funding, how to present research (posters & oral presentations), and finally how to publish research results. Course meets once a week (75 minutes) and will be scheduled around availability of participants, as possible. All Science Scholars are required to take this course once during the three years of their scholarship.
Restrictions: Canisius College Science Scholar scholarship recipient or permission of instructor.
Offered: every spring.

BIO 303 Science Scholars Seminar II: Career Preparation, Applications, & Interviews 1 Credit
Seminar course for students actively pursuing, or planning on pursuing graduate school or post-graduate employment in biology-related fields. During the semester, we will discuss how to identify potential graduate schools/employers, how to prepare application materials, and how to prepare for in-person interviews. Course meets once a week (75 minutes) and will be scheduled around availability of participants, as possible. All Science Scholars are required to take this course once during the three years of their scholarship.
Restrictions: Canisius Science Scholar scholarship recipient or permission of instructor.
Offered: every fall.

BIO 305 Medical Microbiology and its Ecological Basis 3 Credits
Microbiology course that merges discussion of microbial interactions in the human environment (both beneficial and disease-causing) with discussion of microbial interactions in other natural environments. Topics include microbial & ecosystem diversity, the human microbiome compared to other microbial communities, human host-pathogen interaction compared to microbial competition in soil and water, and disease treatment compared to environmental bioremediation.
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.
BIO 305L Medical Microbiology and its Ecological Basis Lab 1 Credit
Current and historical techniques for the isolation and measurement of microorganisms in the environment and for differentiation between medically important bacteria. Topics include microscopy, preparation of culture media and aseptic technique, staining of microorganisms, isolation and culture of specialized groups of bacteria from human, soil or aquatic environments, and determination of antibiotic resistance. Three hours of lab per week.
Prerequisite: minimum grade of D in BIO112L. Corequisite: BIO 305.

BIO 307 Microbiology 3 Credits
Cell structure, genetics, biochemistry and physiology of microorganisms, with emphasis on bacteria. Medical microbiology, epidemiology, and some immunology also are discussed.
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.

BIO 307L Microbiology Laboratory 1 Credit
Microbiology laboratory is concerned primarily with the cell structure, growth, physiology and identification of bacteria. Three hours of lab per week.
Prerequisite: minimum grade of D in BIO112L. Corequisite: BIO 307.

BIO 310 Histology and Histophysiology 4 Credits
A systematic study of structure and function of cells and tissues as viewed by light microscopy. Lab employs tissue slides and digital images. Lab required. Three hours of lecture and one three-hour lab per week.
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.

BIO 312 Primatology 3 Credits
Primatology is the scientific study of primates. Topics include primate evolution, behavior, ecology, and conservation. Emphasis will be placed on reading and critiquing primary literature.
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.
Fulfills College Core: Advanced Writing-Intensive
Offered: every fall.

BIO 313 Embryology 4 Credits
Emphasis will be on early developmental stages as seen in the invertebrate sea urchin and in the chordate animals, including human embryology. Establishment of the basic vertebrate body plan will be shown by classic models such as the frog, chick and pig. Specific embryological and anatomical knowledge will be gained through macro- and microscopic investigations and dissections. Lab required. Three hours of lecture and three hours of lab per week.
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.

BIO 314 Comparative Anatomy of Vertebrates 4 Credits
Evolution of chordates, with emphasis on comparative anatomic, functional, and developmental aspects of vertebrate organ systems. The laboratory portion will include dissection of vertebrate specimens including shark, amphibian, cat, and selected mammal organs. Lab required. Three hours of lecture and three hours of lab per week.
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.

BIO 316 Social Organization of Mammals 3 Credits
Behavior and social structures of rodents, felines, canines, cetaceans, elephants, monkeys, apes and humans. Laboratory includes observation of animal groupings at local zoos and aquariums. Three hours of lecture. Lab optional.
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.
Offered: fall 2016 and spring 2018.

BIO 316L Social Organization of Mammals Lab 1 Credit
Observation of live animal groupings in local zoos and in the wild. Students acquire skills at hypothesis formation and data collection. May include additional fee.
Prerequisite: minimum grade of D in BIO112L. Corequisite: BIO 316.

BIO 317 Sex, Evolution and Behavior 3 Credits
Reproductive behavior of diverse animal species, including humans, from an evolutionary perspective. Focus on how evolutionary accounts explain male-female differences in life style and behavior.
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.
Offered: spring 2017 and fall 2017.

BIO 320 Field Ecology 4 Credits
Introduction to the flora, fauna and physical characteristics of regional terrestrial and aquatic ecosystems. Emphasis on field methods and implementation of scientific method from data collection, analysis, and data presentation. Introduction to Geographic Information System (GIS) and its applications in ecology. Lab required. Three hours of lecture and six hours of lab per week.
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.
Offered: fall of even-numbered years.

BIO 322 Conservation Biology 3 Credits
Study of the plight of endangered species, the biological consequences of fragmented populations, and the scientific basis of habitat/species restoration.
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.
Offered: every spring.

BIO 324 Human Anatomy 3 Credits
A structure/function approach based on what was learned in BIO112, this course will allow the student to increase their conceptual understanding of human anatomy. Lab required. Three hours of lecture and three hours of lab per week.
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.

BIO 324L Human Anatomy Lab 1 Credit
Required lab for BIO 324.
Corequisite: BIO 324.

BIO 325 Reproductive Biopsychology 3 Credits
Neuro-endocrine mechanisms underlying behavior associated with sex, pregnancy, and parental care. Equal focus on human and non-human behavior.
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.
Offered: fall of odd-numbered years.

BIO 333 Plant Biology 3 Credits
Critical examination of the structure, physiology and biochemistry of vascular plants. The interaction of plants with light, water and predators is included. The plants' ability to grow in the face of global climate change is discussed.
Prerequisites: minimum grade of C- in BIO 111 & BIO 112.

BIO 335 Plant Biology Lab 1 Credit
Investigative survey of plant structure and function. Three hours of lab per week.
Prerequisite: minimum grade of D in BIO112L. Corequisite: BIO 335.
BIO 340 Physiology 3 Credits
Examination of the biochemical, molecular and cellular regulatory mechanisms involved in maintaining stable internal environments required for normal cell, tissue and organ function. Course focuses on cell and organ function, integrated physiological control systems for various organ systems (including cardiovascular, respiratory, GI, renal, reproductive, and immune), and the maintenance of homeostasis. Three hours of lecture per week. 
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.

BIO 340L Physiology Laboratory 1 Credit
Experimental study of physiological systems, using biochemical, cellular and hematological techniques and electronic instrumentation. Three hours of lab per week. 
Prerequisite: minimum grade of D in BIO112L. Corequisite: BIO 340.

BIO 343 Entomology 4 Credits
Introduction to the diversity and natural history of insects. The structure, function, evolution and ecology of this group are emphasized. Laboratory focuses on anatomy, diversity and classification. Lab required. Three hours of lecture and three hours of lab per week. 
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.

BIO 345 Functional Neuroanatomy 3 Credits
Examination of human neuroanatomy, with emphasis on the relationship between neuronal circuits and nervous system function/dysfunction. Three hours of lecture per week. 
Prerequisite: minimum grade of D in BIO112L. Corequisite: BIO 340.

BIO 351 Biology Seminar I 1 Credit
Designed to provide sophomore biology major students with the opportunity to learn various methods of preparing scientific/experimental information for oral presentation. Attendance at departmental seminars required. Meets for 1.5 hours per week. 
Offered: every spring.

BIO 353 Biology Seminar II 1 Credit
Provides opportunities for fourth-year Biology major students to present seminars on research of the primary biological literature. Attendance at departmental seminars required. Meets for 1.5 hours per week. 
Prerequisite: BIO 351. 
Fulfills College Core: Oral Communication 
Offered: every fall.

BIO 355 Behavioral Neuroscience 3 Credits
Functions of nervous and endocrine systems in mediating motivation, movement, sensation, ingestion, aggression, emotion, sleep, learning, memory, thought and behavior disorders. 
Prerequisite: minimum grade of C- in BIO 111 & BIO 112. 
Offered: fall of even-numbered years.

BIO 357 Evolution 3 Credits
An in-depth examination of the unifying principles of evolutionary biology. Pre-Darwin ideas about evolution, Darwinian evolution, the Modern Synthesis, and contemporary evolutionary biology. Specific concepts include, but are not limited to, population genetics, speciation, origin of life, phylogenetic analysis, with special emphasis on the evolution of sexual reproduction, virulence evolution, and human evolution. Three hours of lecture per week. 
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.

BIO 357L Evolution Laboratory 1 Credit
Examination of fundamental evolutionary processes through a combination of laboratory experiments, simulations, and analysis of experimental data sets. Three hours of lab per week. 
Prerequisite: minimum grade of D in BIO112L. Corequisite: BIO 357.

BIO 360 Environmental Health 3 Credits
Environmental effects on human health, including biological, physical and chemical hazards in water, soil, and air. Course focuses on public health and epidemiological study approaches. Emerging issues also discussed. 
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.

BIO 364 Zoology: Diversity of Animal Life 3 Credits
This course will explore differences in form, function, systematics and evolutionary relationships of the major groups of animal life on the planet. The course will focus on the evolution of major patterns in body plans and physiological adaptations of the major phyla within the animal kingdom. 
Prerequisite: BIO 112.
Offered: fall.

BIO 364L Zoology: Diversity of Animal Life Laboratory 1 Credit
This laboratory course will explore anatomical and physiological differences within and among taxonomic groups in the animal kingdom. 
Corequisite: BIO 364.
Offered: fall.

BIO 366 Ornithology 4 Credits
Diversity, relationships, ecology, natural history and the behavior of birds. Laboratory focuses on world-wide diversity, local species and field techniques. Lab required. Three hours of lecture and three hours of lab per week. 
Prerequisite: minimum grade of C- in BIO 111 & BIO 112. 
Offered: spring of odd-numbered years.

BIO 370 Plant Morphology 3 Credits
Examination of plant morphology and the relationship between morphology, evolution, plant adaptation and plant biology is emphasized. Laboratory focuses on examining morphological features of local and non-local plants in a hands-on-setting. Lab required. Three hours of lecture and three hours of lab per week. 
Prerequisite: minimum grade of C- in BIO 111 & BIO 112. 
Corequisite: BIO 370L.

BIO 370L Plant Morphology Lab 1 Credit
Required lab for BIO 370. 
Prerequisite: minimum grade of D in BIO112L. Corequisite: BIO 370.

BIO 375 Community Ecology 3 Credits
Examination of how processes in multi-species assemblages affect communities by altering species’ abundances, distributions, composition and driving long-term evolutionary change. Both theoretical models and empirical studies are used to illustrate concepts. Three hours of lecture per week. 
Prerequisites: minimum grade of C- in BIO 111 & BIO 112. 
Offered: occasionally.

BIO 375L Community Ecology Laboratory 1 Credit
The laboratory reinforces ecological concepts discussed in lecture through computer simulations along with field-collected and experimental data. Three hours of lab per week. 
Prerequisite: minimum grade of D in BIO112L. Corequisite: BIO 375.

BIO 377 Freshwater Biology 4 Credits
Explores the biology of lakes, rivers, and wetlands. Lectures cover the main concepts in freshwater ecology, including the major physical, biological, and biogeochemical characteristics of freshwater environments. Lab required. The laboratory component covers field techniques, laboratory analyses and identification of common aquatic organisms. Three hours of lecture and three hours of lab per week. 
Prerequisite: minimum grade of C- in BIO 111 & BIO 112.

<thead>
<tr>
<th>Course Code</th>
<th>Title</th>
<th>Credits</th>
<th>Description</th>
<th>Prerequisite:</th>
</tr>
</thead>
<tbody>
<tr>
<td>BIO 378</td>
<td>Wetlands</td>
<td>3</td>
<td>Explores the plants, animals and environmental conditions that define wetland environments. The course covers the physical characteristics such as the soils and hydrology, the biological adaptations by plants and animals, and human interaction with these diverse and vibrant ecosystems.</td>
<td>minimum grade of C- in BIO 111 &amp; BIO 112.</td>
</tr>
<tr>
<td>BIO 378L</td>
<td>Wetlands Laboratory</td>
<td>1</td>
<td>Optional lab for Wetlands. Meets once a week for three hours.</td>
<td></td>
</tr>
<tr>
<td>BIO 400</td>
<td>Independent Study</td>
<td>1-3</td>
<td>Independent study under the direction of a faculty member. Arrangements made prior to registration. Independent studies require an application and approval by the associate dean.</td>
<td>permission of the instructor, department chair, &amp; associate dean.</td>
</tr>
<tr>
<td>BIO 401</td>
<td>Independent Research</td>
<td>1-4</td>
<td>Independent laboratory research in biology conducted under the supervision of a faculty member. Arrangements made prior to registration.</td>
<td>written permission of faculty member &amp; department chair.</td>
</tr>
<tr>
<td>BIO 404</td>
<td>Genetics</td>
<td>3</td>
<td>Principles of Mendelian, molecular, population, human and quantitative genetics, with emphasis on inherited diseases. Three hours of lecture and a one and a half hour of recitation per week.</td>
<td>minimum grade of C- in BIO 212.</td>
</tr>
<tr>
<td>BIO 404L</td>
<td>Genetics Laboratory</td>
<td>1</td>
<td>Principles of Mendelian and molecular genetics as demonstrated by experiments with Drosophila and other experimental organisms. Three hours of lab per week.</td>
<td>minimum grade of D in BIO212L. Corequisite: BIO 404.</td>
</tr>
<tr>
<td>BIO 406</td>
<td>Population and Conservation Genetics</td>
<td>3</td>
<td>General introduction to the field of population genetics, the branch of evolutionary biology concerned with the genetic structure of populations and how it changes through time. We will examine the interaction of basic evolutionary processes (including mutation, natural selection, genetic drift, inbreeding, recombination, and gene flow), with special emphasis on their application to species conservation. Three hours of lecture per week.</td>
<td>minimum grade of D in BIO212L. Corequisite: BIO 404.</td>
</tr>
<tr>
<td>BIO 406L</td>
<td>Population and Conservation Genetics Laboratory</td>
<td>1</td>
<td>Experimental studies designed to explore fundamental concepts in population genetics and their application in conservation. Laboratory is a combination of in vitro Drosophila experiments and in silico computer simulations/data analyses.</td>
<td>minimum grade of D in BIO212L.</td>
</tr>
<tr>
<td>BIO 408</td>
<td>Biotechnology, Theory in Practice</td>
<td>4</td>
<td>Introduction to the theory and experiments that are the foundation of biotechnology through lecture and laboratory. Topics include genetic engineering, mutagenesis, separation technology, immunobiotechnology and cell biology. Lab required. Three hours of lecture and three hours of lab per week.</td>
<td>minimum grade of C- in BIO 212. Corequisite: BIO 408L.</td>
</tr>
<tr>
<td>BIO 414</td>
<td>Enzymes and Proteins</td>
<td>3</td>
<td>The biochemical characteristics of proteins and enzymes will be examined using a modular approach to target important structural proteins and regulatory enzymes of animal and plant metabolism. Three hours of lecture per week.</td>
<td>minimum grade of C- in BIO 212.</td>
</tr>
<tr>
<td>BIO 414L</td>
<td>Enzymes and Proteins Laboratory</td>
<td>1</td>
<td>Experimental techniques for the purification of proteins, the analysis of protein function and the measurement of enzyme kinetics. Three hours of lab per week.</td>
<td>minimum grade of D in BIO212L. Corequisite: BIO 414.</td>
</tr>
<tr>
<td>BIO 418</td>
<td>Endocrinology</td>
<td>3</td>
<td>Synthesis and cellular/molecular actions of peptides and steroid hormones, growth factors, cytokines, and their roles in regulating physiological processes, maintenance of homeostasis and cancer biology. Three hours of lecture per week.</td>
<td>minimum grade of C- in BIO 212.</td>
</tr>
<tr>
<td>BIO 418L</td>
<td>Endocrinology Laboratory</td>
<td>1</td>
<td>Experimental laboratories researching current topics in endocrinology at the molecular, cellular and organismal levels. Three hours of lab per week.</td>
<td>minimum grade of D in BIO212L. Corequisite: BIO 418.</td>
</tr>
<tr>
<td>BIO 419</td>
<td>Cell Biology</td>
<td>3</td>
<td>In depth examination of cellular processes, including metabolism, motility, gene expression, protein processing and sorting, signal transduction, cell cycle, cell death, cell renewal and differentiation are discussed. Three hours of lecture per week.</td>
<td>minimum grade of C- in BIO 212.</td>
</tr>
<tr>
<td>BIO 419L</td>
<td>Cell Biology Laboratory</td>
<td>1</td>
<td>Experimental laboratories examining different cellular processes, including cytoskeleton, protein localization, and gene expression. Three hours of lab per week.</td>
<td>minimum grade of D in BIO212L. Corequisite: BIO 419.</td>
</tr>
<tr>
<td>BIO 420</td>
<td>Phylogenetics</td>
<td>4</td>
<td>Students will learn how to interpret what phylogenetic trees communicate about the evolution of a group of related species, how clues to the history of populations accumulate at the molecular level in DNA, and how statistical models based on this understanding allows us to build phylogenetic trees that reveal evolutionary history to us. Students will also understand how phylogenies allow us to test specific hypotheses concerning evolution. Three hours of lecture and three hours of lab per week.</td>
<td>minimum grade of C- in BIO 212.</td>
</tr>
<tr>
<td>BIO 420L</td>
<td>Phylogenetics Laboratory</td>
<td>0</td>
<td>Students will get firsthand experience generating genetic data, building phylogenies, and testing their own hypotheses. To accomplish this, students will work both at the lab bench and on the computer, using a number of programs to manipulate the data they generate. In short, this is a class where evolution, genetics, statistics, and computer science meet.</td>
<td>minimum grade of D in BIO212L.</td>
</tr>
<tr>
<td>BIO 424</td>
<td>Epigenetics and Disease</td>
<td>3</td>
<td>Epigenetic mechanisms alter how the genome is utilized and it is apparent that this changes between healthy and disease states and may start during development. This course focuses on the impact of environment influences on phenotype via epigenetic changes. Topics include cancer, metabolism and metabolic syndromes, autoimmune disorders and allergies. Three hours of lecture per week.</td>
<td>minimum grade of D in BIO212L.</td>
</tr>
<tr>
<td>BIO 425</td>
<td>Cellular Neurobiology</td>
<td>3</td>
<td>Cellular and molecular mechanisms underlying nervous system function. Topics include neuron/glia interactions, signaling within the nervous system, neuroplasticity, and neurodegeneration. Three hours of lecture per week.</td>
<td>minimum grade of C- in BIO 212.</td>
</tr>
</tbody>
</table>
BIO 425L Cellular Neurobiology Laboratory 1 Credit
Experimental laboratories researching current topics in cell and molecular neurobiology. Three hours of lab per week.
Prerequisite: minimum grade of D in BIO 212L. Corequisite: BIO 425.

BIO 426 Immunochemistry 3 Credits
Structural concept of antigenic determinants, immunoglobulin sequences and combining site specificity related to the diversity of the immune response and its control. Three hours of lecture per week.
Prerequisite: minimum grade of C- in BIO 212.

BIO 426L Immunochemistry Laboratory 1 Credit
Current methods in immunological research and diagnosis. Designed to present available methodology and insight into the underlying principles. Three hours of lab per week.
Prerequisite: minimum grade of D in BIO212L. Corequisite: BIO 426.

BIO 430 Nutrition and Metabolism 3 Credits
This course offers an in depth examination of cellular nutrition and metabolism. The function of vitamins and metals as essential players in energy generation, cell survival and human disease are discussed. 
Prerequisite: minimum grade of C- in BIO 212.

BIO 432 Developmental Biology 3 Credits
A study of the basic principles that shape the development of a complex, multicellular organism from a single cell, with a particular emphasis being placed on the underlying cellular and molecular mechanisms. Relevant topics include fertilization, cell fate determination and differentiation, pattern formation, and organogenesis. Three hours of lecture per week.
Prerequisite: minimum grade of C- in BIO 212.

BIO 432L Developmental Biology Laboratory 1 Credit
Examination of the cellular and molecular aspects of animal development using classical model organisms. Three hours of lab per week.
Prerequisite: BIO 211L & BIO 212L. Corequisite: BIO 432.

BIO 435 Developmental Neurobiology 3 Credits
Cellular and molecular mechanisms underlying development of the nervous system and neurodevelopmental disorders. Topics include: neural induction, neurogenesis, migration, axon guidance, synaptogenesis, and regeneration. Three hours of lecture per week.
Prerequisite: minimum grade of C- in BIO 212.

BIO 435L Develop Neurobiology Laboratory 1 Credit
Experimental studies of the development and regeneration of nervous tissue using neuronal tissue culture and digital microscopy. Three hours of lab per week.
Prerequisite: minimum grade of D in BIO212L. Corequisite: BIO 435.

BIO 440 Medical Biochemistry 3 Credits
Biochemistry of disease. Includes examination of pathways and regulatory enzymes that lead to normal and disease states. Three hours of lecture per week.
Prerequisite: minimum grade of C- in BIO 212.

BIO 441 Neurobiology of Nervous System Disorders 3 Credits
Cellular and molecular mechanisms underlying diseases of the nervous system, with an emphasis on emerging therapeutic approaches to treating diseases. Topics covered include: neurodegenerative diseases, neurodevelopmental disorders, infectious diseases, neuropsychiatric illnesses, stroke, and trauma. Three hours of lecture per week.
Prerequisite: minimum grade of C- in BIO 212.

BIO 444 Cancer Biology 3 Credits
The causes of cancer, progression of the disease, and therapeutic approaches will be discussed. Students learn the common features of cancers as well as the distinguishing characteristics of a few specific cancers. Throughout the course therapeutic targets will be identified and novel therapeutic approaches will be discussed. Three hours of lecture per week.
Prerequisite: minimum grade of C- in BIO 212.

BIO 450 Molecular Biology 3 Credits
This course focuses on genomes and nuclear organization and function. Topics include genome content and organization from an evolutionary perspective, epigenetic inheritance, chromatin structure and organization, somatic recombination, and organismal complexity. Three hours of lecture per week.
Prerequisite: minimum grade of C- in BIO 212.

BIO 450L Molecular Biology Laboratory 1 Credit
Experimental laboratories examining the regulation of gene expression and how regulation affects expression. Three hours of lab per week.
Prerequisite: minimum grade of D in BIO212L. Corequisite: BIO 450.

BIO 477 Plants and Society 3 Credits
Various ways in which plants affect human existence. Topics include food products, building (utilitarian) applications, medicinal and poisonous plants, propagation and improvement, roles in ecology. Open to students in any major. This course does not count for the biology major. 
Fulfills College Core: Core Capstone, (part of the Sustainability Core Pathway)

BIO 498 Biology With Distinction Thesis 3 Credits
Requirement for any student seeking to complete the Biology with Distinction degree option. Must be taken by seniors in the fall or spring of their senior year.

BIO 499 Biology Internship 3 Credits
Provides students with work experience in the biological sciences. Practical application of material taught in biology classes to the work environment. Requires an application and approval by the associate dean.
Prerequisite: permission of the department chair & associate dean.
