PHYSICS (BS AND BA OPTIONS AVAILABLE)

This major is being discontinued and will not accept new students after September 30, 2020. Students who have declared this major prior to September 30, 2020 will use these standards to complete the program requirements.

Introduction

The Canisius College Physics major provides a strong background in the scientific skills of analysis and experimentation and gives students a broad choice of career opportunities. The Physics major is a preparation for further study in graduate physics and related areas such as oceanography, geophysics, patent law, medicine, engineering and astronomy and entry into research and development employment. The specific goal for majors is a thorough knowledge of basic physical science and the mathematical and experimental application of this basis to the study of natural phenomena. Other offerings are intended to give non-majors an appreciation of the relation between science and the world within which they live.

Our department offers a number of degree tracks to match with the students' interests and career goals.

- Bachelor’s of Science (BS) in Physics (p. 2) - curriculum is designed to prepare the student for graduate school in physics, engineering, or a related scientific field.
- Bachelor’s of Arts (BA) in Physics (p. 3) - curriculum is designed to cover the major topics in the Physics BS program with fewer requirements. This degree is optimal for students interested in a different career path such as teaching in secondary education, law, medicine, journalism, etc. The Physics BA is not meant as preparation for graduate school in physics or engineering. Curriculum easily allows for double majoring.
- Dual Degree Engineering Program (3+2 Physics/Engineering) (http://catalog.canisius.edu/undergraduate/college-arts-sciences/physics/pre-engineering-programs/3-2-program/) - the student spends 3 years studying Physics at Canisius College and the next 2 years in the Engineering Program at the University at Buffalo or Pennsylvania State University at Erie. At the end of the 5 years, the student will receive a Physics degree from Canisius College and a Engineering degree from the other school.
- Pre-engineering Program (2+2) (http://catalog.canisius.edu/undergraduate/college-arts-sciences/physics/pre-engineering-programs/2-2-program/) - the students spend their first 2 years at Canisius College taking the introductory physics, mathematics, and engineering courses. After transferring to the engineering school of their choice, they complete their engineering degree after the third and fourth years. This is a transfer program, and they are not awarded a degree from Canisius College.
- Dual Degree of Physics (Bachelor’s) and Education (Master’s) (p. 6) - Canisius College is now offering dual Bachelor of Arts degree in Physics and Master’s Degree in Education who wish to add teacher certification. The Physics BA (p. 3) requirements are unchanged, but students are counseled to add certain education courses as electives during the undergraduate years so they are prepared to pursue both Adolescence Education 7-12 certification in their content area and Adolescence 7-12 Teaching Students with Disabilities Generalist.
- Research Experiences for Undergraduates at institutions such as University of Rochester, University of Notre Dame, and Baylor University.
- Digital Media Arts (http://catalog.canisius.edu/undergraduate/college-arts-sciences/digital-media-arts/), and Computer Science (http://catalog.canisius.edu/undergraduate/college-arts-sciences/computer-science/), and Digital Media Arts (http://catalog.canisius.edu/undergraduate/college-arts-sciences/digital-media-arts/) Departments. Routinely, students present posters at local, statewide, and national conferences. Past students have conducting research through the National Science Foundation’s Research Experience for Undergraduates at institutions such as University of Rochester, University of Notre Dame, and Baylor University.

Qualifications

Students must maintain a 2.0 GPA in their major and a 2.0 overall average to graduate with a degree in Physics. For admission to the advanced program (Junior/Senior level), a student must have completed, with a grade of at least C, University Physics (PHY 201, PHY 202, PHY 225) and Mathematics through Differential Equations (MAT 222). To qualify for graduation with a degree in Physics, a grade of C- or higher is required in PHY 225, PHY 226, and all 300- and 400-level Physics courses. Students are expected to be prepared to take Calculus 1 (MAT 111) their first semester at Canisius.

Advisement

All students should have an advisor in the major and should contact the department directly to have an advisor assigned if they do not already have one. Meetings with academic advisors are required prior to students receiving their PIN for course registration each semester. All majors should work closely with their advisor in discussing career expectations, choosing their major electives, developing their entire academic program and planning their co-curricular or supplemental academic experiences.

Advising is particularly important for Physics majors due to the highly structured curriculum and numerous course prerequisites.

Major Experiences

Physics majors use modern physics equipment like a 3D printer, lasers, X-ray florescence, a multi-channel nuclear spectrometer, various radiation detectors, and an X-ray spectrometer. They have access to departmental computers. In addition, a large supply of other equipment is available for students to use as early as their first semester. In addition to the standard physics major, students may also wish to consider the Dual Degree Engineering Program, which offers students the option of completing a Physics Degree at Canisius and an Engineering degree at University at Buffalo (UB) or Pennsylvania State University at Erie. For those interested in Physics teaching, a Physics Education program is offered in conjunction with the education department. The Physics Club offers opportunities for social activities, technical tours, lectures and other activities.

The faculty in the department are active in research in the fields of experimental nuclear physics, robotics, physics education, and computational science. Students frequently join with a professor on his or her respective projects and perform a variety of research tasks. Students gain skills in large-scale computation, data analysis, electronics, and detector assembly and testing. In many cases, the research is interdisciplinary with the student working with a physics professor and a faculty member in the Mathematics (http://catalog.canisius.edu/undergraduate/college-arts-sciences/mathematics-statistics/), Computer Science (http://catalog.canisius.edu/undergraduate/college-arts-sciences/computer-science/), and Digital Media Arts (http://catalog.canisius.edu/undergraduate/college-arts-sciences/digital-media-arts/) Departments. Routinely, students present posters at local, statewide, and national conferences. Past students have conducting research through the National Science Foundation’s Research Experience for Undergraduates at institutions such as University of Rochester, University of Notre Dame, and Baylor University.

Double Majors

Students who wish to expand their educational opportunities may decide to declare a double major. This decision may be based on career goals, planned
graduate studies, and/or other student interests. Before a student declares a double major, it is important to meet with the appropriate academic departments for advisement. In order to declare a double major, the student must complete the appropriate double major request form and get the signature of each department chairperson and the appropriate associate dean.

Per college policy, each additional major requires a minimum of 15 credits that do not apply to the student's first or subsequent major. Some double major combinations can be completed within the minimum 120 credit hour degree requirement, but in other cases additional course work may be required. Please note that students will receive only one degree, regardless of the number of majors they complete.

Double majors in Physics BS (p. 2) and Computer Science (http://catalog.canisius.edu/undergraduate/college-arts-sciences/computer-science/), or Physics BS (p. 2) and Mathematics (http://catalog.canisius.edu/undergraduate/college-arts-sciences/mathematics-statistics/) are common and offer interesting career options. The Physics BA (p. 3) can be combined with almost any other program at the college.

**Minors in Other Disciplines**

Minors provide students the opportunity to pursue additional interests but generally do not require as many courses as a major. Minors generally range from five to eight required courses. The minors page (http://catalog.canisius.edu/undergraduate/minors/) provides a complete list of minors and provides links to each minor. Some majors and minors can be completed within the minimum 120 credit hour degree requirement, but in some cases additional coursework may be required. Students must complete the appropriate minor request form.

The Physics minor is particularly popular when combined with majors in Chemistry (http://catalog.canisius.edu/undergraduate/college-arts-sciences/chemistry/), Mathematics (http://catalog.canisius.edu/undergraduate/college-arts-sciences/mathematics-statistics/), or Computer Science (http://catalog.canisius.edu/undergraduate/college-arts-sciences/computer-science/).

**Curriculum**

**Curriculum Requirements for a BS in Physics**

An Ignatian Foundation

All undergraduate students must complete either the Canisius Core Curriculum (http://catalog.canisius.edu/undergraduate/academics/curricular-information/core-curriculum/) or the All-College Honors Curriculum (http://catalog.canisius.edu/undergraduate/academics/curricular-information/all-college-honors-program/). Many schools refer to their college-wide undergraduate requirements as 'general education' requirements. We believe that the core curriculum and the honors curriculum are more than a series of required classes; they provide the basis for a Jesuit education both with content and with required knowledge and skills attributes that are central to our mission.

**Free Electives**

Students may graduate with a bachelor’s degree with more but not less than 120 credit hours. Free electives are courses in addition to the Canisius Core Curriculum or All-College Honors Curriculum and major requirements sufficient to reach the minimum number of credits required for graduation. The number of credits required to complete a bachelor’s degree may vary depending on the student’s major(s) and minor(s).

**Difference with the Physics BA Degree**

The Physics BS degree program is designed to prepare the students for graduate school in Physics, Engineering, or a related scientific field. Therefore, it has more major course requirements than the Physics BA degree. The first 2 years of both programs are identical. The Physics BS degree requires more major courses in the third and fourth years in order to provide more depth or knowledge and experience. The student is advised to consult the BS and BA Roadmaps for the specific differences.

**Major Electives**

Computer Science (http://catalog.canisius.edu/undergraduate/college-arts-sciences/computer-science/) and Mathematics (http://catalog.canisius.edu/undergraduate/college-arts-sciences/mathematics-statistics/) courses are highly recommended, particularly linear algebra.

**Additional Course Considerations**

Courses in the Junior and Senior years rotate on a two year basis. Please consult your advisor about which set of courses is available in any given year.
Note: Course availability may be a factor in determining time to degree completion for transfer students. Discussion with department faculty is highly recommended for transfer students.

Major Electives
Computer Science (http://catalog.canisius.edu/undergraduate/college-arts-sciences/computer-science/) and Mathematics (http://catalog.canisius.edu/undergraduate/college-arts-sciences/mathematics-statistics/) courses are highly recommended, particularly linear algebra.

Difference with the Physics BS Degree
The Physics BS degree program is designed to provide the basic topics in the field of physics and the tools to apply mathematical and scientific skills to different disciplines. This program is not a preparation for graduate school in physics or engineering. The program does provide the students with the freedom to explore other programs like education, journalism, pre-law, pre-medicine, and finance, to name a few. The Physics BA is easier to double major than the Physics BS. Therefore, it has fewer major course requirements than the Physics BS degree. The first 2 years of both programs are identical. The Physics BA degree requires fewer major courses in the third and fourth years to allow the students to take a variety of electives and try different fields. The student is advised to consult the BS and BA Roadmaps for the specific differences.

Additional Course Considerations
Courses in the Junior and Senior years rotate on a two year basis. Please consult your advisor about which set of courses is available in any given year.

Note: Course availability may be a factor in determining time to degree completion for transfer students. Discussion with department faculty is highly recommended for transfer students.

<td>and Fundamental Physical Chemistry Laboratory</td>
</tr>
</tbody>
</table>

Total Credits: 24-28

¹ PHY 331 requires PHY 330 as a prerequisite.
² PHY 446 is required for PHY 447.
³ PHY 335 is highly recommended as a co-requisite for PHY 330.
⁴ PHY 443 requires MAT 222 as a prerequisite.
⁵ If CHM 301 is used for Group II, PHY 332 cannot be used for Group I.

Note: MAT 111 and MAT 112 are prerequisites for one or more of the courses listed above. The Physics minor is particularly popular when combined with majors in Chemistry, Mathematics, or Computer Science.
Courses

PHY 104 Seminar for Physics and Pre-engineering Majors 0 Credits
A key aspect of science is the communication of ideas. The seminar is one method of sharing scientific ideas and results. This course gathers Physics and Pre-engineering majors to learn about advances in their respective fields, about related careers, and about the research performed by the department faculty.
Prerequisite: None. Corequisite: None. Offered: every fall & spring.

PHY 129 Introduction to Astronomy 3 Credits
Understanding modern astronomy by using ideas from basic physics. Mathematics minimized. Naming and viewing stars and constellations is included.
Fulfills College Core: Field 6 (Natural Sciences) Offered: once a year.

PHY 130 Introductory Geology 3 Credits
For science and non-science majors alike, this course covers the fundamental concepts of physical geology, including the rock cycle; erosion; tectonic processes including earthquakes and volcanism; the importance of water from oceans to rivers to glaciers; and society’s dependence on energy and mineral resources from the Earth. Our planet is an interacting system of matter and energy, giving us mountains, lowlands, oceans, rivers, earthquakes, volcanoes, and the resources we need for human prosperity.
Offered: occasionally.

PHY 131 Earthquakes: Seismology and Society 3 Credits
The science behind earthquakes: causes, locations, frequency and measurement; affects on geography, human structures and society.
Fulfills College Core: Field 6 (Natural Sciences), Global Awareness Offered: once a year.

PHY 201L University Physics I Laboratory 1 Credit
Laboratory for University Physics I. This lab course engages students in experimental measurements spanning the areas of mechanics, with the objective of training students in experimental measurements, data manipulation and analysis, error analysis, deductive thinking, and instrumentation, providing depth to students’ understanding of the phenomena taught in PHY201.
Prerequisite: MAT 110 or MAT 111. Corequisite: PHY 201. Offered: every fall.

PHY 202 College Physics II 3 Credits
College Physics for biological-science students. Electricity and magnetism, geometrical and physical optics.
Prerequisite: minimum grade of C- in PHY 201 and 201L. Corequisite: PHY 202L. Offered: spring.

PHY 202L University Physics II Laboratory 1 Credit
This laboratory provides students with a greater understanding of electromagnetic phenomena, wave phenomena, and optics, and supports PHY202. Measurements of microscopic quantities, like the charge and mass of the electron, give students an opportunity to explore the structure of matter. Other experiments involve the physics of electrical currents, electric properties of bulk matter, magnetic fields and their effect on beams, wave phenomena, and the nature of light and its interaction with optical materials. This course trains students in experimental measurements, data manipulation and analysis, error analysis, deductive thinking, and instrumentation.
Prerequisite: minimum grade of C- in PHY 201 and 201L Corequisite: PHY 202. Offered: every spring.

PHY 223 General Physics for Physical Science Majors I 3 Credits
Prerequisite: MAT 110 or MAT 111. Corequisite: PHY 223L. Fulfills College Core: Field 6 (Natural Sciences) Offered: every fall.

PHY 223L General Physics for Physical Science Majors I Laboratory 1 Credit
Laboratory for calculus-based general physics I.
Prerequisite: MAT 110 or MAT 111 Corequisite: PHY 223. Offered: every fall.

PHY 224 General Physics for Physical Science Majors II 3 Credits
Calculus-based general physics. Electricity and magnetism, geometrical and physical optics.
Prerequisite: minimum grade of C- in PHY 223 and PHY 223L. Corequisite: PHY 224L. Offered: every spring.

PHY 224L General Physics for Physical Science Majors I Laboratory 1 Credit
Laboratory for calculus-based general physics II.
Prerequisites: min grade of C- in PHY 223 and PHY 223L Corequisite: PHY 224. Offered: every spring.

PHY 225 General Physics for Physical Science Majors III 3 Credits
Prerequisite: PHY 202 with a minimum grade of C-, and MAT 211 which may be taken concurrently. Corequisite: PHY 225L. Offered: every fall.

PHY 225L General Physics for Physical Science Majors III Laboratory 1 Credit
Laboratory for calculus-based general physics III.
Corequisite: PHY 225. Offered: every fall.

PHY 226 Basic Electronics 3 Credits
Circuit analysis, power supplies, semiconductor physics, operational amplifiers, digital electronics. Integrated circuit techniques. Includes laboratory work each week.

PHY 226L Basic Electronics Laboratory 1 Credit
Laboratory for basic electronics course.
Corequisite: PHY 226. Offered: every spring.

PHY 330 Electrodynamics I 3 Credits
Static and time-varying classical electric and magnetic fields in free-space and matter. Prior completion of or concurrent registration for PHY 335 is strongly encouraged.
Prerequisite: Minimum of C- in PHY 202. Offered: fall of odd-numbered years.

PHY 331 Electrodynamics II 3 Credits
Primary topic: electromagnetic waves in free-space and matter, beginning with the Maxwell equations. Additional topics: radiation and special relativity.
Prerequisite: PHY 330. Offered: spring of even-numbered years.

PHY 332 Statistical and Thermal Physics 3 Credits
Develops statistical concepts and methods used to relate macroscopic to microscopic descriptions of many particle systems.
Prerequisite: PHY 225. Offered: spring of odd-numbered years.
PHY 335 Mathematical Analysis for Physicists 4 Credits
Theory and applications of infinite series, Fourier series, Green's functions, Fourier integrals, vector calculus, linear algebra, partial differential equations, and complex variable.
Prerequisite: MAT 222 or permission of instructor.
Offered: fall of odd-numbered years.

PHY 350 Modern Physics Laboratory 1 Credit
This course covers the basic principles of 20th century modern physics. The topics include blackbody radiation, particle/wave duality, x-ray diffraction, Bohr's model of the atom, quantum tunneling, and the Schrödinger equation.
Prerequisite: PHY 225.
Fulfills College Core: Advanced Writing-Intensive
Offered: every fall.

PHY 351 Advanced Laboratory 1 Credit
This course emphasizes advanced experiments and experimental technique. Topics include, but are not restricted to, dosimetry, radiation detection, gamma-ray spectroscopy, Rutherford scattering, atomic spectroscopy, thin-film deposition, and magnetic resonance.
Prerequisite: PHY 225.
Fulfills College Core: Oral Communication
Offered: every spring.

PHY 443 Classical Mechanics 3 Credits
One, two, and three dimensional motion of a particle, non-inertial systems, classical scattering, rigid-body motion. Lagrange and Hamilton equations, calculus of variations, oscillations.
Prerequisite: PHY 225 & MAT 222.
Offered: fall of even-numbered years.

PHY 444 Special Topics in Physics 1 Credit
This course will cover model formation and development using archival journal articles in physics. The subject material will rotate by semester among topics such as astrophysics, quantum theory, and thermodynamics. Students will be expected to read and critique journal articles, lead discussions on journal articles, and trace the development of an area of physics through assigned readings.
Prerequisite: permission of instructor. Restriction: must be physics major or minor with senior standing.
Offered: spring of odd-numbered years.

PHY 446 Quantum Mechanics I 4 Credits
Corequisite: PHY 225 & MAT 222.
Offered: fall of even-numbered years.

PHY 447 Quantum Mechanics II 3 Credits
Application of Schrödinger's equation, Hamiltonian mechanics, angular momentum, intrinsic spin, parity, and time-dependent quantum mechanics. PHY 446 is highly recommended.
Prerequisite: PHY 446.
Offered: spring of odd-numbered years.

PHY 449 Nuclear Physics Lab 1 Credit
Introduction to experimental nuclear physics. Experiments study nuclear instrumentation, characteristics of radiation and nuclear spectra.
Prerequisite: PHY 446.
Fulfills College Core: Advanced Writing-Intensive
Offered: occasionally.

PHY 498 Senior Project 1-3 Credits
A one-semester research project done under the supervision of a faculty member.
Prerequisite: permission of department chair. Restriction: senior standing in physics.
Offered: spring.

PHY 499 Independent Study 1-3 Credits
An independent study with a faculty member of the Physics Department. Independent studies require an application and approval by the associate dean.
Prerequisite: permission of the instructor, department chair, & associate dean. Restriction: permission of the chair.
Offered: fall & spring.

Introduction

The Dual Degree Program (http://catalog.canisius.edu/graduate/school-education-human-services/educator-preparation/dual-degree-content-and-msed-swd/#curriculumtext) offers a BA in Physics as well as a MSEd in Adolescence 7-12 Teaching Students with Disabilities Generalist. This dual degree program leads to Initial Adolescence Certification in Physics as well as Initial Certification in Adolescence 7-12 SWD Generalist. Since it leads to two teaching certificates, candidates must meet the content requirements for both over the course of their curriculum. In most cases, the content area major covers those requirements. In some instances New York State has additional requirements. Please note, this dual degree program can be completed in as little as 5 years if one semester is included.

Curriculum

An Ignatian Foundation

All undergraduate students must complete either the Canisius Core Curriculum (http://catalog.canisius.edu/undergraduate/academics/curricular-information/core-curriculum/) or the All-College Honors Curriculum (http://catalog.canisius.edu/undergraduate/academics/curricular-information/all-college-honors-program/). Many schools refer to their college-wide undergraduate requirements as 'general education' requirements. We believe that the core curriculum and the honors curriculum are more than a series of required classes; they provide the basis for a Jesuit education both with content and with required knowledge and skills attributes that are central to our mission.

Free Electives

Students may graduate with a bachelor's degree with more but not less than 120 credit hours. Free electives are courses in addition to the Canisius Core Curriculum or All-College Honors Curriculum and major requirements sufficient to reach the minimum number of credits required for graduation. The number of credits required to complete a bachelor's degree may vary depending on the student's major(s) and minor(s).

Choose 4 of the following upper division courses: 12-14
PHY 330: Electrodynamics I
PHY 331: Electrodynamics II
PHY 332: Statistical and Thermal Physics
PHY 335: Mathematical Analysis for Physicists
PHY 443: Classical Mechanics
PHY 446: Quantum Mechanics I
PHY 447: Quantum Mechanics II
CHM 111 & 111L: General Chemistry I and General Chemistry I Laboratory 4
MAT 111: Calculus I 4
MAT 112: Calculus II 4
MAT 211: Calculus III 4
MAT 222: Differential Equations 3

Science Elective (choose one of the following): 4
BIO 111 & 111L: Introductory Biology I and Introductory Biology Laboratory I
CHM 112 & 112L: General Chemistry II and General Chemistry II Laboratory
CSC 112 & 112L: Data Structures and Data Structures Laboratory
MAT 219: Linear Algebra
MAT 351: Probability & Statistics I

Total Credits 58-62

Curriculum Requirements for a Master’s Degree in Education

The education curriculum is provided below for the MSeD portion of the dual degree programs. Notice that several foundation courses are taken at the undergraduate level intermingled with other undergraduate requirements. The graduate courses begin at the 500 level and continue until completion.

- SPE 640

\[1\] Science Elective to be chosen from BIO 111, CHM 112, CSC 112, MAT 219 or MAT 351. The science elective may be taken in a subsequent semester if it requires a prerequisite. In this case, take a course in the Core Curriculum in the spring semester of the freshman year.

\[2\] Choice of upper division courses: PHY 330, PHY 331, PHY 332, PHY 335, PHY 443, PHY 446, and PHY 447.

Learning Goals & Objectives

Student Learning Goal 1
Physics majors will know how to learn physics.
Students will:
- **Objective A**: Critically assess written expositions of physics, contrasting those ideas which are fundamental from those which are consequential;
- **Objective B**: Identify the circumstances under which a principle applies.

Student Learning Goal 2
Physics majors are critical thinkers that can produce analytical solutions to physical problems.
Students will:
- **Objective A**: Identify a problem and generate equivalent statements of a problem;
- **Objective B**: Delineate the principles of physics and analytical techniques used to obtain a solution to a problem;
- **Objective C**: Apply the principles and techniques of physics to obtain a solution to a problem.

Student Learning Goal 3
Physics majors possess the technical skills needed to function effectively in a physics laboratory.
Students will:
- **Objective A**: Collect a broad range of data with an ability to adapt to new experimental methods, apparatus and tools;
- **Objective B**: Apply fundamental statistical methods to analyze data;
- **Objective C**: Display data with clarity.

Student Learning Goal 4
Physics majors communicate ideas in physics with precision and clarity.
Students will:
- **Objective A**: Produce precise and clear expository written material about physics;
