NEUROPSYCHOLOGY MINOR

The Neuropsychology minor is designed to attract students who are interested in pursuing careers in the fields of clinical and cognitive neuropsychology as well as to enhance understanding of brain/behavior relationships for those aspiring to other health-related professions.

Although this minor is available to any student, prerequisites may make it difficult for some students to complete all of the requirements.

Please note, to receive a minor, a student must complete at least 9 credit hours of coursework distinct from their other credentials (i.e., majors, other minors). Please note that “ancillary/supporting” courses required for a major may still count as distinct courses as long as the remaining coursework still meets the 30 credit-hours required for a major.

Curriculum

In addition to the four foundation courses (PSY 101, PSY 102, PSY 201, PSY 202) and fulfillment of the Core Area requirement, students will be expected to complete the following courses:

<table>
<thead>
<tr>
<th>Code</th>
